

To See With Fresh Eyes

This work presents a rare opportunity to witness the evolution of a field through the eyes of one of its principals. And it is our good fortune that he is also one of its most personable and gifted storytellers. ... Tough issues are engaged with the necessary penetrating and no-holds-barred insight, but with a humanity that helps us to stay engaged as well.

Andy Hines, University of Houston Futures Program

Slaughter is an important leader in the field of futures studies and has done much to bring integral principles into conversation with this exciting field over the past two decades. I encourage readers to track down the many articles and books (he) has written which make use of Integral Theory's principles ... he is a standout integral scholar-practitioner.

Sean Esbjorn-Hargens, Journal of Integral Theory and Practice

Richard Slaughter is one of the most significant pioneering scholars in the field of Integral Futures. Following the path Richard has taken over the past 30 years and being shown the treasures he has discovered along the way by one of the few masters of strategic foresight is a rare delight. *To See With Fresh Eyes* is a feast for the soul and confirmation of the central role foresight must play in humanity's conscious evolution.

Richard Hames, The Wayfinder Project, Bangkok

Richard Slaughter's work brings home the enormity of the task facing mankind, and the urgent need for a coherent, fully Integral approach to both understanding the problem and creating strategies to address it. The power of the Integral approach is brought out in his writing – it really is an excellent way to identify all the facets that need to be brought together.

Adolph Hanich, retired Founding Director of the Australian Graduate School of Entrepreneurship and Counselling Psychologist

Richard Slaughter's writing has always proven to be of great use in the teaching of Foresight to a range of students. His latest book, which sweeps up his earlier writings in a new perspective (Integral) in response to a new challenge (global emergency) looks certain to be another valuable contribution to the discipline. I look forward to engaging with it in the classroom.

Dr Peter Hayward
Director Masters of Strategic Foresight, Swinburne University
